

Amendments to the Specification

Please delete the paragraph spanning page 6, line 25 through Page 7, line 1.

Please replace the paragraph spanning page 11, lines 11-15 with the following:

"Personal imaging repository." A personal imaging repository is a conceptual term describing the exchange infrastructure used to exchange graphics composition and graphics data with web services. Users are associated with their graphics data through user profiles. It should be noted that the personal imaging repository ~~50 30~~ can represent any type or combination of data storage devices.

Please replace the paragraph spanning page 28, line 28 through page 26, line 9:

In operation, browser 16 initially accesses a web site and using appropriate request commands (HTTP for the current generation of browsers), downloads web application content 528 therefrom, which includes a set of executable instructions intended to be executed in ~~browser 16~~ browser 16 to provide browser 16 with predetermined functionality. These executable instructions comprise generic access instructions (see definition above), which are system wide instructions expressed in some language (i.e., JAVA™), that call the resources of an imaging extension API to access the user's personal imaging repository 522 to perform web imaging operations. Such generic access instructions can be, by way of example but not by way of limitation, JAVA™, JavaScript™, and C-sharp instructions. A system wide standard preferably manifested as an API or set of APIs typically specifies "generic access instructions," "generic access requests," and "target graphics."
